

Sealed Enclosure Cooling

Explosion proof systems engineered and purpose built for hazardous locations

4,000 – 11,000 BTUH :: 1.1 – 3.2 kW

Features and Benefits

Built for Class 1, Div 2, Groups B, C, & D; T4

- Engineered specifically for hazardous location cooling, not rebuilt from light industrial air conditioners
- Does not require purge and pressurized system
- Dust resistant coils for filterless operation in most environments
- Cleanable, reusable aluminum mesh filter protects coils for extremely dusty and dirty atmospheres
- Digital temperature control
- Narrow design to accommodate 12-in (300-mm) deep cabinets
- R134a earth-friendly refrigerant
- Models for 115, 230 and 400/460 3-phase VAC power input
- UL Listed to save customers time and money with agency approvals
- Easy-mount flanges for simple installation
- Mounting hardware, gaskets and user manual furnished with the unit
- Every unit functionally tested before shipping
- Attractive design with no heavy cast enclosure and minimal use of visible fasteners

Enclosure cooling specifically for classified applications.

As more and more electrical equipment becomes packed into smaller enclosures, the heat generated inside those enclosures rises. That heat can cause process shutdown through tripped overloads or worse, damage to the equipment. In some critical applications, downtime can cost thousands of dollars per hour.

Specific Systems MiniPac enclosure coolers provide cooling that can help prevent costly downtime.

Engineered to provide cooling directly for heat sources such as VFDs, AC drives, PLCs, and communication equipment, our MiniPac enclosure cooling systems maximize cooling efficiency while minimizing the unit footprint. This allows for mounting on enclosures as shallow as 12".

With severe duty options including 316 stainless steel and corrosion resistant coatings, these systems are built to cool process control equipment in hazardous locations like those found in chemical, petrochemical, refining, and drilling applications...even offshore.

MiniPac systems are available in cooling capacities up to 11,000 BTUH (3.2 kW) with simple installation and minimal maintenance.

Which industries benefit from using our environmental control units?

Solutions for:

- Oil & gas exploration and development
- Oil & gas extraction and production
- Oil & gas processing
- Oil & gas transportation and storage
- Waste water treatment and storage
- Pulp & paper mills
- Potash facilities
- Offshore oil & gas
- Grain processing
- Steel manufacturing
- Data centers
- Power plants (coal-fired, NGL, nuclear, etc.)
- Fueling stations
- Mobile broadcasting units
- Mining / resource extraction
- Rapid emergency response teams

Critical applications, including:

- Motor control centers
- Remote instrument enclosures
- Analyzer houses
- Controller / operator cabins
- Variable frequency drive buildings
- Communication shelters
- Power distribution centers
- Blast resistant buildings
- Hazardous materials storage

Specific Systems' units are most often used in heavy industrial applications, such as petroleum, petrochem, production, processing facilities, pipeline pump stations, power/utility distribution, waste water treatment, and grain processing facilities. With a wide selection of options and available, even the most custom industrial applications can be fit to a tee.

Petroleum Processing

Specific Systems has been dedicated to the design, engineering, and manufacturing of special application environmental control systems for the petroleum and process industries since 1974. Our engineering oriented company places special emphasis on durability of design with the ability to withstand adverse atmospheric conditions, including spark resistant and explosion proof areas. In offshore production platforms as well as onshore facilities, many with very corrosive atmospheres, the InPac series units consistently meet and exceed those challenges.

Offshore Petroleum Facilities

Offshore oil processing and production facilities present some of the world's most corrosive and challenging environments. Equipment used in these facilities must withstand salt spray as well as corrosive chemicals and fumes produced during petroleum processing.

HVAC units used in these adverse conditions must be designed to handle the harsh conditions including hydrogen sulfides and many other corrosive chemicals. Specific Systems MiniPac units are designed, engineered, and manufactured to withstand those and other corrosive elements, as well as explosive environments.

Power / Utility Distribution

InPac customers include many energy-related companies, including power generation and distribution. These companies use Specific Systems to cool and protect the power distribution switchgear, MCC, VFD, and process equipment in packaged control centers.

Our engineers are always available to assist in calculating capacity needs for your specific applications by running heat load studies based on internal electrical and electronic equipment and internal and ambient design temperatures.

Other Industries

Along with the petrochemical, utility generation, and distribution industries, Specific Systems manufactures systems destined for use by many other special industries as well as military and governmental agencies. Specific Systems units are found in such diverse applications as food processing, space shuttle ground support systems, and America's space defense initiative.

Other regular purchases of Specific Systems InPac units include grain and ethanol production facilities and explosive production facilities

Specific Systems Modular Technology is Number One

Since 1974, Specific Systems, LTD. has held strong to a commitment of reliability, service, and design excellence in special purpose environmental air conditioning, heating, ventilating, and pressurization systems. This has been accomplished through proven engineering and design principles, combined with a dedication to continued improvements in our standard modular products. With this strong engineering focus, Specific Systems leads the industry in modular environmental control technology.

Through the years, Specific Systems has designed and manufactured a full range of specialized products, including custom environmental control packages, filtration systems, massive mobile cooling centers, and other HVAC systems. Our custom engineering services are available on a contract basis for special design and development programs.

InPac

A broad product line of industrial & explosion proof A/C, purge & pressurization, and heating equipment for the petroleum and process industries. Available in sizes from 1–50 tons, InPacs are designed with redundant systems for use in highly corrosive and explosive atmospheres.

AirPak

The AirPak line of wall-mounted A/C units are available in capacities from 5–20 tons. The units are designed for use in heavy-duty commercial and industrial applications such as telecommunications, instrumentation, control, and electrical powerhouse shelter assemblies.

Mac

Our Military product line, available in MilSpec configuration with capacities from 1–10 tons. The Mac series is often chosen for use in highly mobile electronic shelter applications.

Minipac

The MiniPac Series enclosure HVAC systems for hazardous locations are available in capacity ranges from 4,000–11,000 BTUH with optional 316 stainless steel construction and corrosion resistant coatings. MiniPac systems can be mounted in Class I Division 2 areas on enclosures as narrow as 12" making them a perfect fit for any hazardous application.
